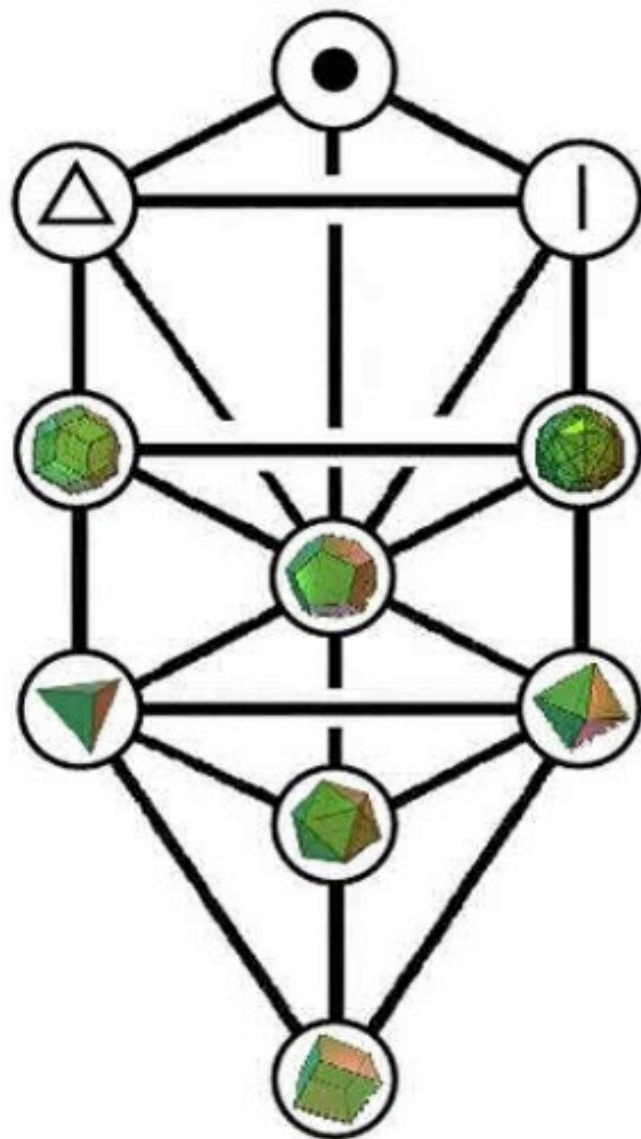

Fig. 18. The lowest five Sephiroth of Constructi correspond to the Elements of Earth (Malkuth, cube), Water (icosahedron, Yesod), Fire (Hod, Tetrahedron), Air (Netzach, octahedron) and Aether (Tiphareth, dodecahedron) known to exoteric versions of ancient philosophy. However, esoteric traditions speak of two high Elements, which correspond to Chesed and Geburah. The disdyakis triacontahedron and the rhombic triacontahedron should be assigned, respectively, to these Sephiroth.

Hebrew - Sanskrit to English

By raising the number of views of the same spiral on the same donut to the symmetry shadows of Dodeca and Pent - (Implosion) - the higher alphabets - Ophanim / Greek and roots of Arabic / English are created.

The 3 superscript commas used over the Hebrew letters (crownlets 'Taggin' on the letters in the Torah) to indicate your relative view from the symmetry axes of the cube (the 'Matrix' - 3X3X3 matrix = 27 letter Hebrew alphabet) - became the vertical and horizontal bar (The Cross) lines in Sanskrit - which when removed leave the same alphabet (from Alpha Draconis* - where the Caste system genetic laws originate). Releasing yourself from the 'Matrix' - getting up off your cross - in flatland - requires consuming this perspective. Each alphabet letter is a shadow on the wall of ('flatland') the cave - you get up off your cross when you see - E pluribus Unum- From Many: ONE.

(* Alpha Draconis whose star map geometry becomes the design for Angkor Wat, Senshi Chinese Pyramids, for the Arabic letter 'eL' - whose flag star triangles shadow of cube matrix becomes Isreal, whose genetic laws become Caste system, & aboriginal law, and whose D-Raa-- Kaa-n -, dragons become the center of most of family genetic crest in Europe. See also their triangular shaped star craft mentioned below).

The 'Matrix' - the traditional Hebrew (H'ibiUru) alphabet - was the soul eating design for Jewish 'religion' to feed hapless human souls to Enlil / Yalweh's hungry ghost - story at goldenmean.info/pope . Beware of these fallen Saraphim 'Nephelim' - 'Flame Letter' worshippers like Keys of Enoch's Hurtak (who wouldn't know an Enochian letter if it bit him)- who tell you with beady eyes that don't unfold - to obey a HIERARCHY !

The REASON the tetra/cube (design of Hebrew alphabet) is a prison - is the cube is NOT inherently compressible. (Internal wave harmonics interfering with each other create cancellation- incubation). In the Dodeca / pent (language) symmetries (of Ophanim, Greek, Arabic - overview goldenmean.info/orion) - internal (Golden Ratio perfected self-similarity) wave interference is all constructive (non-destructive). This produces perfect compression, collapse, scale-invariance, fusion, implosion, awareness , ensoulment/bliss for DNA.

STUDY: OPHANIC LETTER COMPONENTS VIEWED AS CONICAL PROJECTIONS

1. Single Vortex. The energy of a cone (a wide letter part tapering to a point) flows in one direction. This implies a bridging from one state to another. Below, the conical form of the letters "T" and "O" are shown revolving one half a turn laterally in space.

Golden Ratio via Golden Rhombus

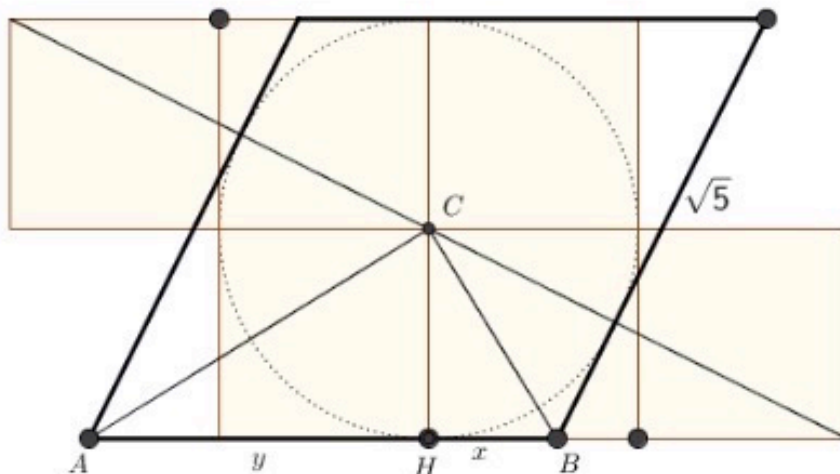

John Molokach came up with a construction of the **golden ratio** by first constructing a *golden rhombus*, that is, a rhombus in which the ratio of the diagonals (long to short) equals ϕ .

In one sweep, John additionally obtains $1/\phi$, $1/\phi^2$, and ϕ^2 . How does this work?

Put together two 1×3 rectangles shifted one unit relative to each other, as shown above. Draw the long diagonal of the resulting shape and the unit circle at its center. Draw the tangents to the circle at the points where it meets the diagonal. All sides of the obtained quadrilateral equal $\sqrt{5}$, so this is indeed a rhombus.

Draw its (perpendicular) half-diagonals to obtain a right triangle ABC with the altitude CH , as shown below.

From the two equations $x + y = \sqrt{5}$ and $xy = 1$, $x = \frac{\sqrt{5} - 1}{2} = \frac{1}{\phi}$ and $y = \frac{\sqrt{5} + 1}{2} = \phi$.

Now, $\left(\frac{AC}{BC}\right)^2 = \frac{y^2 + 1}{x^2 + 1} = \frac{\phi^2 + 1}{(1/\phi)^2 + 1} = \phi^2$ which shows that the diagonals in the rhombus are indeed in the Golden Ratio.

INCURSION OF THE GOLDEN RATIO Φ INTO THE SCHRÖDINGER WAVE FUNCTION USING THE Φ RECURSIVE HETERODYNYING SET

S. Giandinoto^{*}, R. L. Amoroso[§] & E.A. Rauscher[§]

^{*}Advanced Laser Quantum Dynamics Research Institute (ALQDRI)

10321 Briar Hollow Drive, St. Louis, MO 63146 USA

[§]Noetic Advanced Studies Institute, 608 Jean St, Oakland, CA 94619-1422 USA

Email: noetic.advanced.studies@mindspring.com

In conclusion, it may be surmised that the state function $\Psi(x, y, z, t)$ of the Time-independent Schrödinger wave equation is directly proportional to a pre-exponential factor containing the four basic constants (B4C), namely 2, e, p and Φ and the time-independent wavefunction $\Psi(x, y, z)$. This conclusion arises as a direct result of the incorporation of the heterodyning set of wavelengths into the actual classical Schrödinger wave equation. Also, it appears that by so doing, this paper has demonstrated that individual wavelengths and/or frequencies are actually a summation of an infinite number of wavelengths or frequencies. This concept, brought forth in this paper tends to support the so-called "Many Worlds Interpretation" (MWI) of quantum theory as opposed to the Copenhagen Interpretation whereby the "collapse" of the quantum mechanical wavefunction Ψ occurs as a result of the mere "observation" of a subatomic particle. Additionally, perhaps the most important concept resulting from this paper is that the ubiquitous irrational number Phi (Φ) is both an integral and essential constant in the quantum mechanical realm of reality.

turning fractal physics into
social engineering

We have modelled how golden ratio
recursion is optimized inside the
Rhombic Triantahedron -
not the dodecahedron or cuboctahedron.
Triantahedra cluster around a
central void - the centre is 'empty'.
Every triantahedron is capable of phi
implosion-every triantahedron contains
the phi scaled stellation

Social organization achieves maximum
coherence when individuals discover and
share their true creative potential -
dynamics become frictionless - the
structure itself accommodates infinite
potential

Advanced civilizations already utilize this
"self organizing" dynamic - they look to
see how close a global society, like
humanity, is to organizing in this way - its
the key that turns the lock that allows a
planet based culture to unite with
galactic cultures and thereby
multidimensional unification.

Reinstated Kingdom of Hawaii officials signing the Declaration for a Hawaii Star Visitor Sanctuary. May 28, 2014.

On May 28, 2014 official representatives of the reinstated Kingdom of Hawaii released a declaration creating a sanctuary for extraterrestrial visitors to Earth. The "[Declaration for Creating Hawaii Star Visitor Sanctuary](#)" will make it possible for extraterrestrials to land on property set aside exclusively for hosting "star visitors" in the area of Kalapana on the Puna coast of the Big Island of Hawaii. The "Star Visitor Sanctuary" will be on sovereign land claimed by the reinstated Kingdom of Hawaii. The [Kingdom comprises a government](#) led by a Prime Minister, elected representatives to two houses of Parliament, and a revised Hawaii Constitution.

Galactic Communication Optimisation - Grayham Forscutt

THINK WORKSHOPS

Starseed and Starkids number over 100,000,000. Are you one? Earth (heart) Grid is the interface for galactic forces, ETs and Ultraterrestrials (family arriving from the future). ETs use this gridwork as a fuel and for manoeuvring, while UTs move anywhere by intent alone. Entering the galactic community is optimised by collectively actualizing sacred geometric principles.

Learn the etiquette of galactic culture (the role of Starseed), and how the reorganisation of community infrastructure based on sacred geometries (Christallization) and the combined application of the Mayan calendar interfaced with Earthgrid is how we invite ETs and connect with futuristic humanity

SUPERLUMINAL TRANSPORTATION OF HIGH ENERGY PARTICLES THROUGH WORMHOLES USING THE PHI-BASED SOLUTION TO THE SCHRÖDINGER WAVE EQUATION, THE THEOREM OF RESIDUES AND THE CAUCHY INTEGRAL FORMULA

Salvatore Giandinoto, Ph.D.

*Advanced Laser Quantum Dynamics Research Institute
10321 Briar Hollow Drive
St. Louis, MO 63146*

Abstract. This paper will demonstrate that the transportation of high energy subatomic particles through wormholes occurs at superluminal speeds through an 'elastic' wormhole entity which adjusts its diameter based upon the kinetic energy of the subatomic particle. Additionally, it is shown that the diameters of such wormholes are of sub-Planckian lengths for energetic subatomic particles. This is demonstrated by the use of the Phi-based solution to the Schrödinger wave equation, the theorem of residues and the Cauchy integral formula of complex analysis. Furthermore, it will be shown that a possible quantum gravitational constant called the *Giandinoto-Amoroso-Rauscher Quantum Gravitational Constant (GAR-QGC)* may be the quantal unit of the hypothetical spin-2 graviton. It will also be shown that the expansion of the universe at the Planck time occurred with a kinetic energy of approximately 4.14×10^{29} eV.

Orbs. Carlos Tavares from Exopolitics

explains:

"Orbs are pure conscious intelligent entities. Conscious balls of energy.

There are different types of orbs. An entity orb has a pattern inside of it, normally some type of circular structures. But there are also thought orbs. Another type of orb is a small pure white orb. These are believed to be

observers from the future. We are only seeing the lower frequencies of these beings, from our perspective, namely the bottom end or round part. As Ramtha explained if we could see the entire being they would appear more like a cone or pyramid. The tail of them being of higher frequency. Our eyes do not see. They are only lenses, like

Bucky Fuller called the Triacanthedron the final membrane between matter and energy, his 'T' phi tetra's were membrane conserving while his 'E' quanta tetra's [slightly larger] were energy as radiation.

The Triacanthedron's phi scaled minimum volumetric tetrahedral modules scale in powers of golden ratio, offering maximum constructive interference suggesting they are the primordial elements/voxels of consciousness and the fundamental constituents of energy: superluminal electrical charge envelopes, offering highest fidelity teleportation.

Music of the Spheres

Bilateral keyboard symmetries based on Fibonacci chords
extending a scale beyond the boundaries of the octave

Harmonic Formation Theory

Harmonics ripple from well edges

Fibonacci ratios already plot major intervals, as the sound current closes towards the minor/major 6th, a vortex opens (phi spiral) as audible overtones are drawn/magnetized through the phi centre. Here the vortex (black hole) causes the sound current as overtones to peak at the tritone and 6ths to then disappear becoming inaudible

Hence music emphasising golden ratio is prime for multidimensional access.

* Supported by Bovenkamp and Giandinoto in the paper: "Incorporation of the Golden Ratio Phi into the Schrödinger Wave Function using the Phi Recursive Heterodyning Set."

Stargate mapping covering 15 years of remote viewing experimentation
of SubPlanck Phase Space

Cosmogenetist + subPlanck Phase Space explorer
Grayham Forscutt

We believe consciousness itself forms the structure of both space and time.
With that in mind we mapped a hierarchal series of astrophysical centre's.
Each larger cluster displayed the same geometry, a decagon, which is a
cross section of the D.N.A. helix.

Realtime inspiration opened doors that only later were fully recoverable with
the thinking mind.

We kept a diary of ideas and insights that once again only became fully
developed much later as new research and discoveries came along.

Towards the end of our remote viewing period, the famous Monroe Institute
developed
and offered a program for seasoned out-of-body explorers which was
almost identical.

We suggest reading the results of Monroe's program thoroughly before
embarking upon this journey of discovery.

CENTRAL SPIRITUAL SUN

DK via Alice Bailey

In the advanced levels of initiation, the monad reveals the door which opens on the Way of Higher Evolution. This doorway exists in rarified, etheric material on the highest planes of the Cosmic Physical Plane. Thus access to this door is the product of attaining a similarly high vibration of attunement, in one's vehicles. "It is the electrical fire which forms the door of initiation for those initiations which guard the Way to the Higher Evolution." (3)

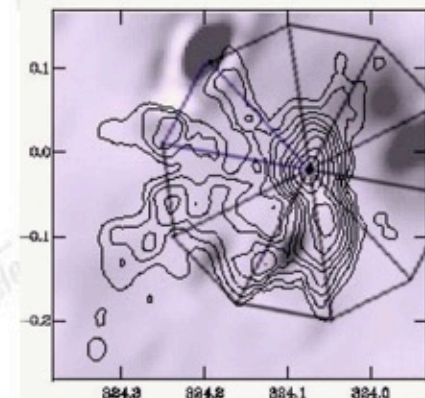

The door into the Way of the Higher Evolution simply permits the entrance of the sensitive initiate into "spheres of intimacy" (as they are sometimes called) which are this time cosmic in their implications, planetary in their effects, and which give to the initiate what has been called the "key to the Sun"—as it conditions the solar system—just as the door to initiation gives to the aspirant the "key to the kingdom of God." (4)

Through Alice Bailey's writings the Tibetan teacher imparts key points regarding these seven Cosmic Paths, from which the Master chooses direction some time and experience after their Causal body ~ the individuated Soul body itself ~ was sacrificed in order, through their life, to bridge monadic awareness into the three worlds of experience: the physical, astral / emotional, and mental planes.

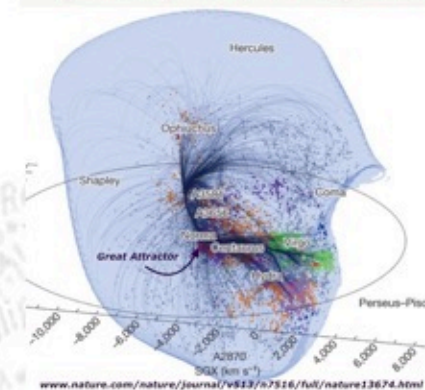

All Paths Lead to the Same Place

Essential to this teaching is the postulation that all of these Paths eventually lead to the same place: the Central Spiritual Sun. (5) All the Cosmic Paths gradually came into being when our planetary Logos ~ the deity of our planet ~ created the Earth and started the involutionary process of Creation. Much later, due to the process of evolution, they are accessed as the Path of Return. (6)

"Each of these Paths eventually leads to one or other of the six constellations which (with ours) form the seven centers in the body of the ONE ABOUT WHOM NAUGHT MAY BE SAID." (7) This great Being, also called the Cosmic Logos, is comprised etherically of seven solar systems, including ours. (8) These seven systems are Its force centers. Our solar system, together with six other solar systems, orbits around a Cosmic Center. (9)

The Da Vinci Code's 'Golden Ratio' Could Reveal Most Fertile Wombs

Published On: Thu, Aug 16th, 2012 | [Women Health](#) | By [BioNews](#)

The 'Golden ratio' of 1.618, which was popularized by Dan Brown's 'The Da Vinci Code', may even apply to our bodies internally and could reveal the most fertile wombs, according to a gynaecologist.

The number 1.618, which has been taken from the famous Fibonacci sequence, is said to be the key to everything – from encrypting computer data, to the numbers of spirals on a sunflower head, to our very own limbs and why the Mona Lisa is so pleasing to the human eye.

Dr Jasper Verguts, from the University Hospital Leuven in Belgium, theorised that women would be most fertile if they had a uterus of perfect proportions – a womb where the ratio of length to width is 1.618.

For his study, Verguts measured the wombs of 5,000 women using ultrasound and drew up a table of the average ratio of length to width for different age bands, the Daily Mail reported.

He then found that the ratio is around 2 at the time of birth but decreases as women age to 1.46.

Verguts also found the age when women are most fertile on an average – between the ages of 16 to 20 – the ratio was 1.6

"This is the first time anyone has looked at this, so I am pleased it turned out so nicely," he told The Guardian.

SUPERLUMINAL TRANSPORTATION OF HIGH ENERGY PARTICLES THROUGH WORMHOLES USING THE PHI-BASED SOLUTION TO THE SCHRÖDINGER WAVE EQUATION, THE THEOREM OF RESIDUES AND THE CAUCHY INTEGRAL FORMULA

Salvatore Giandinoto, Ph.D.

*Advanced Laser Quantum Dynamics Research Institute
10321 Briar Hollow Drive
St. Louis, MO 63146*

Abstract. This paper will demonstrate that the transportation of high energy subatomic particles through wormholes occurs at superluminal speeds through an ‘elastic’ wormhole entity which adjusts its diameter based upon the kinetic energy of the subatomic particle. Additionally, it is shown that the diameters of such wormholes are of sub-Planckian lengths for energetic subatomic particles. This is demonstrated by the use of the Phi-based solution to the Schrödinger wave equation, the theorem of residues and the Cauchy integral formula of complex analysis. Furthermore, it will be shown that a possible quantum gravitational constant called the *Giandinoto-Amoroso-Rauscher Quantum Gravitational Constant (GAR-QGC)* may be the quantal unit of the hypothetical spin-2 graviton. It will also be shown that the expansion of the universe at the Planck time occurred with a kinetic energy of approximately 4.14×10^{29} eV.
